- Natural-looking results

Fotona  
choose perfection

# What is Fotona4D®?

Fotona4D® is a **non-invasive** face-lifting procedure that successfully combats facial aging.

It targets wrinkles and nasolabial folds, as well as surface-level imperfections such as freckles and sun spots, while simultaneously restoring a youthful glow to provide **natural-looking** results with **little to no downtime**.

# How does it work?

Fotona4D® is a series of laser treatments that are applied both to the face and to the inside of the oral cavity.

It uses two laser wavelengths and 4 different treatment modes to rejuvenate and tighten skin while also targeting imperfections.

# Proven results and high satisfaction rates

You can already experience tighter and fresher looking skin after a single treatment, while complete results take place gradually over a period of 3-4 months.

With Fotona4D® you invest in the quality of your skin and maintain a **refreshed and healthy look** with a **youthful glow**.

# What is the treatment like?

In the beginning you may experience a gradual warming sensation, and after a few minutes there might be some very brief hot sensations in the treatment area, which dissipate quickly. If you select to have a more aggressive treatment, you may experience a day or two of redness.

The treatment is **non-surgical and non-invasive**, allowing you to resume your normal daily activities **immediately** after the treatment. It lasts 30-45 minutes.
