

IV Vitamin Infusions by Farsk

FÄRSK

HOW IS IV THERAPY DIFFERENT FROM TAKING A SUPPLEMENTS?

Well, with IV drips, the body receives the vitamins and minerals by injecting the solution directly into the bloodstream, a process that bypasses the digestive system and allows clients to feel the positive effects instantly.

THE MOST COMMON BENEFITS OF IV THERAPY ARE:

Nourish the body through vitamins, minerals and electrolytes

Enhance energy

Boost the metabolism

Strengthen the immune system

Protect against free radicals

Regenerate cells, and improve skin conditions

Improve hydration

What are your wellness goals?

Do you have an area of your health you would like to improve?
